

## FRIESEN'S INC. AIM GLIDE - IPPE BOOTH# 46067

A new collaboration between Friesen's Inc. and Intralox has yielded a great innovation in product handling. The AIM Glide provides a new solution to a long-time industry challenge by simplifying switching and diverting. This simple yet effective and efficient system replaces many older and more costly technologies in 1:2 or 1:3 diverting of a wide range of products. From small trays and packages to many larger packaged products, this system provides flexibility in product size and configuration.

Imagine a product that can provide a one-size-fits-all approach to taking product from your thermoformer or packaging line and delivering it from one to three lanes with little or no changeover between product size and rates. With a small footprint and the ability to handle a high production rate, this new innovation can help provide maximum efficiency in your processes.

In addition to its operational advantages, the AIM Glide also enhances operator safety. Traditional systems often require heavy guarding to protect operators, while the AIM Glide's simplified and enclosed design minimizes that need—creating a safer, more user-friendly solution that is also easier to clean and maintain. **Be sure to visit us at booth #B46067 to learn more about this new innovation!**
