Introducing:

Some of our existing line of custom innovative equipment for eliminating safety risk and improving yield gains in beef and pork production as well as making work processes in other industries more efficient and less labor intensive

Automated Smart Rib and Strip Saws:

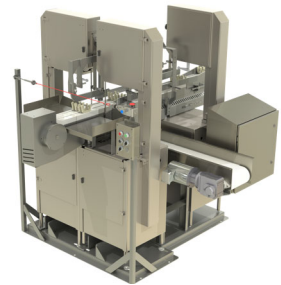

Accurate, hands free chine bone removal from beef ribeye and striploin, and porkloin subprimals

In-Line-Saws:

A full line of laser guided, conveyORIZED bandsaws for every cut on a beef or pork fabrication floor. Also offered are in line saws for ice, dry ice and much more

Smart ProPortioning Saws:

Hands free portioning of bone in and frozen beef and pork products. Either dimensionally or by weight, one operator functions two machines to safely and efficiently produce ready to package product. An excellent solution for almost every value added product as well

Bone Dust Removal System:

Reduces non-value added labor needed to remove bone dust from cut bone-in product prior to packaging. Works well in conjunction with MWM ProPortioning Saw

Conveyors and Conveyor Systems:

Custom designed and manufactured for every application. From sanitary product conveying designs to spirals and material handling systems

Robot Integration:

From stacking applications to product placement and more, our automation team is able to help solve your problem
