In the midst of bitter temperatures, blustery winds, and feet of snowfall, we know how crucial it is to have a reliable alarm system in your pig barn. Aside from reliability, the convenience of acknowledging an alarm without driving to your farm in the middle of a snowstorm can be life changing.

The Distynct Smart Alarm offers remote management from your phone or laptop, allowing fewer drives to your site and accountability for your employees. The last thing you want to worry about is which employee is taking care of the alarm going off at one of your sites. The Distynct dashboard allows managers to build a trustworthy calling tree, track who is getting alerted and acknowledging alarms, and who is making changes to the temperature parameters.

The dashboard also allows you to adjust the temperature parameters in all of your barns with a single click. Gone are the days of driving to each individual site to adjust the parameters, or even doing it one by one from your phone. Choose as many or as few of your barns as you wish and they'll be adjusted accordingly.

The record-breaking weather days are less than ideal for farmers, but the wellbeing of both you and your animals matters. Let us help you make one simple change that will make a drastic impact.

Stay warm. Stay safe. Stay connected.
