

R.A Jones is back in Atlanta, exhibiting at the International Production and Processing Expo (IPPE). Visit us at booth C25122 to discuss the unmatched quality of our KartridgPak chub packaging equipment.

Introduced over 70 years ago, KartridgPak equipment has been engineered and fine-tuned over decades to provide maximum efficiency, quality, and reliability in packaging a wide range of product types. Our extensive experience meeting the needs of customers operating in various industries over the decades helps us easily identify what features of our machines will benefit you most to increase profitability.

Clips formed from wire fed spools are much more cost effective than preformed clip solutions and our machines' ability to maintain label position running registered films represents best-in-class performance. KartridgPak chub packaging machine options from R.A Jones include equipment with output capacities up to 160 ppm and machine capabilities for a diverse range of materials and products.

See more of our [KartridgPak Equipment Here](#), and visit us at booth C25122 to see how over 100 years of engineering excellence, superior customer service, and being a part of Coesia—the largest network of packaging technologies and process solutions in the world—can help your production line.
