

Munters FoodTech brings its product brands together at IPPE 2026 to support data-driven decisions across food production

Atlanta, GA – January 20, 2026 – At IPPE 2026, Munters FoodTech will bring all its brands together under one roof, showing how software, controllers, connected IoT technologies, and services work together to support better decisions in poultry and swine production. At Booth B7019, visitors will see how real-time data and automation enable proactive decisions, more efficient operations, and more predictable outcomes across the food supply chain.

The joint stand is designed as a house of collaboration and practical insight. A space where producers, integrators, and partners can see how technology moves from concept to everyday use, helping teams act with more confidence today while preparing for what comes next.

Across the industry, many producers are working with strong individual technologies that are not always connected. Data sits in different systems, insights arrive too late, and frontline teams are left to fill the gaps. Munters FoodTech is addressing this by linking mission critical activities such as climate control, feeding, sensing, and software into solutions that are easy to use, easy to scale, and designed to solve real problems.

“Transforming the future of food systems starts with the decisions made every day in operations as well as at farms,” said Pia Brantgärde Linder, President of Munters FoodTech. “Our role is to make those decisions easier and more informed. By applying digital solutions enabled by AI to bring climate, feeding, automation, and data together in a practical way, we help producers move from reacting to problems to acting early with confidence. That’s how real progress is made, step by step, together.”

Inside the stand, attendees will experience how decisions powered by real-time data and AI translate into action, from the field to the boardroom. Integrated demonstrations will show how proactive decisions lead to more predictable outcomes, improved efficiency, and stronger performance over time.

At IPPE 2026, each Munters FoodTech brand will highlight its role within the shared offering:

- **MTech Systems** will highlight how hardware-agnostic data flows into analytics and decision support, helping producers and integrators streamline work, measure sustainability, and focus time on improving outcomes.
- **Hotraco** will showcase solutions for precision automation for climate, feed, water, lighting, weighing, egg flow and farm management, helping farmers gain visibility and control to improve performance and operational efficiency.
- **Inobram** will present solutions for smart feeding and automation solutions designed to improve consistency, animal welfare, and day-to-day work for farm teams.

About Munters Group

Munters is a global leader in energy-efficient air treatment and climate solutions. Using innovative technologies, Munters creates the perfect climate for customers in a wide range of industries. Munters has been defining the future of air treatment since 1955. Today, around 5,400 employees carry out manufacturing and sales in more than 30 countries. Munters Group AB reported annual net sales of more than SEK 15 billion in 2024 and is listed on Nasdaq Stockholm. For more information, please visit www.munters.com.

- **AEI** will demonstrate environmental controllers, egg flow management, and monitoring solutions that help layer operations act earlier using accurate, timely insights.
- **Munters Rotem** will display smart, serviceable control systems for farm climate management, delivering optimal air quality, animal welfare, and reliable production via IoT-enabled remote management.

On the IPPE TechTalks stage, Padmini Persaud will present *“Technology-Driven Greenhouse Gas Emission Reductions: A Case Study in Innovation”* on Thursday, January 29 at 11:00 AM, sharing practical examples of how technology can support measurable emissions reductions in animal production.
