

WELCOME GALDI RG480: FILLING MADE EASY

Galdi Inc. Booth#[B22009](#)

*MAXIMUM EASE OF USE AND HIGH CAPACITY, UP TO 10,000
CARTONS/HOUR: THIS IS THE NEW GALDI RG480 FILLING
MACHINE*

We are pleased to introduce the latest generation Galdi RG480 filling machine: maximum ease of use, consistent reliability over time and all the advantages of a Galdi packaging system. The new Galdi RG480 is a **double-line half-gallon** (95x95 mm section) **packaging machine** with an output of 10K cartons/hour. It was developed for packaging products distributed following the cold chain and is ideal for:

- [ESL dairy products](#)
- [Fruit juices](#)
- [Vegetable beverages](#)

Synergistic collaboration with our subsidiary in the United States, Galdi Inc. has enabled us to adapt every detail of this new filling machine to ensure exceptional performance, such as the high capacity of up to 10,000 cartons/hour, in order to make the machine compatible with the specific requirements of a highly competitive market, such as the U.S. market.

The most user-friendly packaging machine (ever)

One of the most striking features of the new Galdi RG480 is that it is the packaging machine with the best **usability** ever.

We like to call it **"an inexperienced operator-proof machine"**: with minimal training and the constant support of the wizard mode, operators are able to run the packaging system at its best performance. It is therefore the ideal solution for manufacturers with high turnover who want to be able to rely on **consistent production performance**, regardless of the operator. Among the most important solutions:

- **Ergonomics:** e.g., the **high-capacity front-loading warehouse** is developed to make the operator's work easy, optimizing time
- **Visibility:** e.g., the large glass surfaces and interior spaces are designed to enable constant visual control over the process
- **Usability:** the new **hyper-intuitive HMI** is equipped with features to improve operators' daily work (e.g., new Wizard mode and Help Function)
- **Facilitated maintenance:** the superior platform allows maintenance activities to be carried out easily and safely, optimizing time and procedures

Local support and continuous assistance

The new Galdi RG480 packaging machine embodies the best of Galdi research in terms of reliability:

Repeatability of performance over time: MME > 95% regardless of external factors

Advanced monitoring: achieved with next-generation sensor technology and digital systems for deep monitoring and troubleshooting, even remotely

These features are matched by the support of our **US-based team** active in the US territory **since 2015**. Thanks to [Galdi Inc.'s subsidiary](#) and spare parts warehouse in New Jersey, our customers on the U.S.

territory can count on the expertise of our Field Service Engineers-directed by [Christopher Radford](#) and dedicated Customer Care for all spare parts needs.

Other pluses and benefits of Galdi

Not just ease of use and reliability. The state-of-the-art Galdi RG480 packaging machine is designed by our specialists to ensure:

- **Compatibility with all food cartons:** the packaging machine handles all types of packaging and caps on the market, ensuring precise seals and optimal aesthetic results
- **Superior hygiene:** developed specifically for products with extended shelf lives, Galdi RG480 is equipped with some top-of-the-line solutions such as the carton and cap disinfection system. Superior hygienic efficiency in the face of low residues and emissions
- **Sustainability:** Galdi's focus as a [Benefit Society](#) results in packaging machines designed to optimize resource consumption, reduce product waste, and find solutions that are increasingly compatible with companies' high environmental standards
- **Unique point of contact:** Galdi acts as a unique point of contact for the supply of complete packaging lines, providing consulting and operational resources
