FOR IMMEDIATE RELEASE – 1/27/2026

## Double L Group Launches Weatherhood Solution for Enhanced Protection and Airflow Performance

Double L Group, a leading innovator in agricultural ventilation solutions, announces the launch of its Weatherhood, a durable exterior ventilation accessory designed to protect broiler and agricultural facilities from the elements while maintaining optimal airflow performance. Engineered with market flexibility in mind, the Weatherhood delivers dependable protection without compromising ventilation efficiency.

Designed for installation on broiler houses and other agricultural buildings, the Weatherhood features an oversized profile that minimizes air restriction while shielding ventilation openings from rain, wind, and direct sunlight. Its closed-top design and UV-protected construction ensure long-lasting performance, even in harsh outdoor conditions.

### Key Features:

- **UV-Protected Plastic Construction:** Built to resist sun exposure without becoming brittle over time, ensuring long-term durability.
- **Oversized Design for Minimal Air Restriction:** Allows proper airflow while reducing pressure loss commonly caused by undersized exterior hoods.
- **Closed-Top Weather Protection:** Restricts rain, wind, and sun intrusion to help maintain consistent internal conditions.
- **Easy Installation:** Installs directly to standard framing and studs for quick, efficient mounting.
- **Darkout Compatibility:** Available with or without a pre-assembled darkout for simplified installation and added light control
- **Market-Flexible Configuration:** Designed to meet a variety of facility and regional ventilation needs.

“The Weatherhood was developed to provide reliable exterior protection while preserving the airflow performance producers depend on,” said Trinity Persful, CEO and President of Double L Group. “This solution helps facilities protect their ventilation systems from the elements while maintaining consistent environmental control inside the house.”
