Double L Group Introduces Direct X Darkout Box for Superior Light Control and Uninterrupted Airflow

Double L Group, a leading innovator in agricultural ventilation solutions, announces the launch of the Direct X Darkout Box, a high-performance light-blocking baffle system designed to eliminate sunlight intrusion while maintaining optimal airflow. Engineered for modern poultry and agricultural facilities, the Direct X Darkout Box helps producers protect light-sensitive environments without sacrificing ventilation efficiency.

The Direct X Darkout Box features an advanced darkout blade and baffle design that allows efficient air movement while preventing unwanted light entry. With a large 7' x 6' housing that delivers lower static pressure drop and higher airflow than competing products, this system supports consistent ventilation performance even in demanding conditions.

Key Features:

- **Engineered Darkout Blade & Baffle System:** Allows uninterrupted airflow while effectively blocking sunlight, maintaining proper ventilation rates and environmental control.
- **Corrosion-Resistant Fiberglass Housing:** Constructed with a durable fiberglass box designed for long-term performance in harsh agricultural environments.
- **Full and Half Dark Options:** Available in 11.5" Full Dark and 5.75" Half Dark configurations to meet varying facility light-control needs.
- **Flush Wall-Mount Design:** Flush mounting improves aisle clearance, allowing easier movement of equipment and personnel.
- **Optimized Fit for Standard Framing:** Fits between 8' on-center framing and columns for easier integration into existing structures.
- **Wide Fan Compatibility:** Available for 36", 52", and 57" exhaust fans.
- **Offset Hinge Bracket Design:** Allows doors to fully open in aisles as narrow as 36", eliminating clearance issues common with traditional darkout boxes.
- **Durable Rubber Seal:** Ensures a tight seal to prevent light leaks while maintaining efficient airflow.

"The Direct X Darkout Box was engineered to solve one of the most common challenges in poultry housing—blocking light without restricting airflow," said Trinity Persful, CEO and President of Double L Group. "This product gives producers greater environmental control, improved airflow efficiency, and a durable solution built for the realities of poultry operations."
