FOR IMMEDIATE RELEASE – 1/05/2026

Double L Group Expands Direct X Line with High-Performance Direct X Exhaust Fan with new sizes – now with 24” and 52”.

Double L Group, a leading innovator in agricultural ventilation solutions, announces the continued expansion of its Direct X Exhaust Fan lineup, engineered to deliver exceptional air volume, energy efficiency, and superior corrosion resistance for poultry and agricultural facilities. Available in multiple sizes and configurations, the Direct X Exhaust Fan is designed to maximize airflow performance while minimizing maintenance and operational costs.

Built with a robust, slide-through wall housing and a cone design no wider than the fan itself, the Direct X Exhaust Fan allows for closer fan spacing than traditional systems. This innovative design increases ventilation capacity without requiring additional wall space, making it ideal for both new construction and facility upgrades.

#### Key Features:

- **Exceptional Airflow Performance:** Delivers high air volume and efficiency, with BESS Labs-verified performance across multiple fan sizes and configurations.
- **Maintenance-Free Direct Drive Design:** Eliminates belts, pulleys, and tensioners, reducing downtime and long-term maintenance costs.
- **Brushless Magnet EC Motor with Soft Start:** Provides a wide operating range, excellent airflow-to-energy ratio, longer motor life, and reduced component wear.
- **Durable Shutter & Door Options:** Available with either an EcoTight shutter or butterfly door, both designed to provide a superior seal while improving air volume. Doors naturally fall back into place without springs due to their unique angled installation.
- **Corrosion-Resistant Construction:** Features a fiberglass-reinforced SMC shell engineered to withstand harsh agricultural environments.
- **Flexible Installation Options:** Robust housing slides through the wall for secure mounting and efficient airflow, and is available in both white and black SMC housing.
- **Multiple Sizes & Configurations:** Offered in 24”, 36”, 52”, and 57” models to meet a wide range of facility ventilation requirements.

“The Direct X Exhaust Fan was designed to deliver reliable, high-efficiency ventilation while reducing maintenance demands and extending equipment life,” said Trinity Persful, CEO and President of Double L Group. “By combining verified performance, durable materials, and a maintenance-free direct drive system, this fan helps producers improve airflow consistency and overall facility efficiency.”
