FOR IMMEDIATE RELEASE – 1/13/2026

Double L Group Introduces the GalvX Inlet. Designed for Efficient Retro-Fit Ventilation Upgrades to galvanized inlets.

Double L Group, a leading innovator in agricultural ventilation solutions, announces the launch of the GalvX Inlet, a versatile and high-performance inlet solution engineered specifically for retrofit projects. Designed to overcome the shortfalls of old, galvanized inlets, the GalvX provides the curved, European benefits without beetles eating through the insulation. The new GalvX Inlets also seal against air and light leakage, the GalvX Inlet helps facilities improve air quality, reduce heating costs, and enhance overall environmental control at an affordable price point.

The GalvX Inlet is engineered to direct incoming fresh air along the ceiling-to-peak for effective air mixing, eliminating drafts at animal level while maintaining consistent temperatures throughout the facility. Its sealed design prevents air leakage and condensation buildup, helping reduce wet litter issues and improving overall house conditions.

**Key Features:**

- **Complete Air & Light Seal:** Fully seals to prevent unwanted air leakage and light intrusion, improving ventilation control and consistency.
- **Optimized Airflow Direction:** Directs fresh air along the ceiling-to-peak for superior air mixing and uniform temperature distribution.
- **Draft Reduction & Energy Savings:** Minimizes drafts at floor level, reducing heat loss and lowering heating costs.
- **Rodent & Beetle Resistant Construction:** Built to withstand pest intrusion, protecting both the facility and ventilation performance.
- **No Deflectors Required:** Designed to operate efficiently without the need for wind or sun deflectors, simplifying installation and maintenance.
- **Versatile Retrofit Design:** Covers multiple opening sizes, making it ideal for a wide range of retrofit applications.
- **Easy Installation:** Engineered for quick and straightforward installation, reducing labor time during upgrades.

“The GalvX Inlet is our answer to move away from galvanized inlets to improve ventilation without major structural changes,” said Trinity Persful, CEO and President of Double L Group. “By upgrading to the curved inlet design, we hope to set growers up for success at a great price.”
