Datacor Introduces Comply™, a Smarter Tool for Safer Feed

Florham Park, NJ, December 2025 – Datacor, a leading provider of process manufacturing, chemical distribution, and engineering software, today announced the launch of Comply, a new compliance feature designed to help animal feed manufacturers ensure safer, more consistent formulations.

As regulatory requirements and quality expectations continue to rise, Comply provides manufacturers with an automated way to support compliance within their formulation and production processes, helping teams move beyond manual checks and reduce the potential for error. Comply automatically evaluates formulas against defined specifications and requirements, flagging potential issues early in the process.

Datacor will showcase Comply at the International Production & Processing Expo (IPPE), taking place January 27–29, 2026 in Atlanta, Georgia. Attendees can visit Datacor at booth #A311 to learn more.

IPPE is the world's largest annual poultry, meat, and animal food industry event, bringing together global leaders and innovators across the protein and animal nutrition industries. Datacor looks forward to connecting with industry professionals and sharing how Comply supports confidence and control in feed manufacturing.
