## **FV Group Showcases Rapid-Cure Plastifloor® MMA Flooring for Cold Storage and Low-Temperature Installations**

**Royse City, TX — December 23, 2025 — FV Group**, a national installer and distributor of high-performance resinous flooring systems, will highlight **rapid-curing Plastifloor® MMA flooring solutions** for cold storage, freezers, and temperature-controlled food processing environments at the **International Production & Processing Expo (IPPE)**.

Plastifloor MMA systems are formulated to install and cure in **low-temperature conditions**, allowing flooring work to proceed in refrigerated and freezer environments without extended shutdowns. These systems are particularly well-suited for USDA-regulated food facilities requiring seamless, hygienic, and durable flooring with minimal downtime.

The system architecture includes **Plastifloor® Primer 118** for strong adhesion to concrete, followed by self-leveling and flexible MMA layers as required by substrate and operational conditions. Final wearing surfaces utilizing **Plastifloor® 522** or **Plastifloor® 526** deliver chemical resistance, thermal shock tolerance, and slip resistance tailored to dry or wet processing zones.

Key system advantages include:

- Installation and cure at low ambient and substrate temperatures
- Rapid return to service, often within hours
- Resistance to thermal cycling and freeze-thaw conditions
- Seamless, non-porous surfaces supporting USDA sanitation standards

“Cold storage and refrigerated facilities present unique challenges for flooring systems,” said **Gammy Figueroa**, Manager of FV Group. “Plastifloor MMA allows us to install durable, hygienic floors without shutting down operations for days.”

Visit **FV Group at Booth B39077** to learn more about Plastifloor MMA systems for cold storage and low-temperature environments.
