FV Group Highlights Slip-Resistant Plastifloor® MMA Flooring Solutions for Wet and Dry Processing Areas

Royse City, TX — December 18, 2025 — FV Group, a national installer and distributor of resinous flooring systems, will present **slip-resistant Plastifloor® MMA flooring configurations** designed for both wet and dry food processing environments at **IPPE**.

Slip resistance is a critical safety requirement in food and poultry processing facilities. Plastifloor MMA systems allow precise control of surface texture through the use of **quartz broadcast aggregates** and performance additives tailored to operational conditions.

For dry processing and packaging areas, **Plastifloor® 522** combined with **Additive 523** provides controlled slip resistance while maintaining ease of cleaning. For wet processing, washdown, and sanitation zones, **Plastifloor® 526** with **Additive 527** delivers enhanced traction under wet and greasy conditions without compromising hygiene.

System benefits include:

- Customizable slip resistance based on area use
- Seamless, non-porous, and easy-to-clean surfaces
- Resistance to fats, oils, bloods, and cleaning chemicals
- Compliance with USDA and food industry sanitation practices

“At IPPE, we’re demonstrating how slip resistance can be engineered—not guessed—based on real facility conditions,” said **Gammy Figueroa**, Manager of FV Group.

Visit **FV Group at Booth B39077** to review slip-resistant Plastifloor MMA flooring options for food processing environments.
