

Biocamp Showcases Advanced Probiotics and Bacterial Vaccines for Poultry at IPPE 2026

Campinas, SP, Brazil – [December, 2026] – Biocamp, a Brazilian biotechnology company with more than 25 years of experience and a pioneer in the production of probiotics for poultry, is pleased to announce its participation in the **International Production & Processing Expo (IPPE) 2026** in Atlanta, USA. At the event, the company will present the most complete probiotic product portfolio on the market, along with bacterial vaccines specifically developed for the poultry industry.

With a long-standing commitment to scientific excellence, Biocamp delivers innovative, natural, and reliable biological solutions designed to support the health, performance, and sustainability of modern production systems. Beyond its leading poultry line, the company also produces **probiotics for swine, fish, and dogs**, reinforcing its dedication to animal health across multiple species.

“At IPPE 2026, we are excited to showcase how Biocamp continues to evolve and strengthen global animal production through advanced microbiology,” said **Ricardo Ito, Business Manager** at Biocamp. “Our mission is to support producers with effective and responsible tools that promote animal health while protecting people and the environment.”

Commitment to Sustainable and Responsible Production

Biocamp integrates **profitability, sustainability, and animal welfare** into every stage of its development process. All products are manufactured in compliance with international regulatory standards and are designed to meet the growing global demand for safe, natural, and antibiotic-reducing technologies.

Technical Expertise and Support

In addition to its comprehensive product line, Biocamp provides specialized **technical support**, backed by a highly qualified and continuously trained team. This ensures producers and partners receive accurate guidance tailored to their specific challenges in hatcheries, farms, and integrated operations.
