## Learn How to Cut Freeze-Dry Time, Boost Yield, and Prove It with Parker Freeze Dry's TechTalk at IPPE

BERESFORD, S.D. — [Parker Freeze Dry](#) will present an IPPE TechTalk, "Unlocking Data Insights to Improve Outputs, Cycles, and Traceability," at 9:30 a.m. on Thursday, January 29, 2026, showing poultry, meat, and egg processors how intelligent freeze-drying turns run data into easy operational wins.

In 20 minutes, IPPE attendees will see how to replace guesswork with real-time insights and practical KPIs that matter to operations, QA, and engineering teams for food processors. The session is free for IPPE registrants.

"Technology is changing the future of freeze-drying to be predictable and scalable," said Jerad Ducklow, EVP for sales and marketing at Parker Freeze Dry. "Now, teams have the ability to see and track the right signals to improve output, quality, and consistency, shorten cycles, and automatically document every lot so you have answers when you need them."

### What attendees will learn:

- **How to focus on outcomes ops leaders care about**, including consistent yield and texture by SKU; shorter, repeatable cycles; and audit-ready batch records.
- **What insights you can get from every run**, including product and shelf temperatures, vacuum/pressure, condenser and refrigeration behavior, and alarm trends, all tracked in simple dashboards.
- **How to accelerate cycles and solve problems faster** by identifying trends to find slow zones, tuning settings with confidence, catching drift earlier, and exporting the information you need for QA and customer reports.

The session, held in Theater B45011, is free for IPPE registrants. Parker Freeze Dry invites attendees to stop by **Booth B39053** after the session to see example dashboards and talk through specific freeze-drying scenarios for their brands.

### About Parker Freeze Dry

Parker Freeze Dry is a family-owned U.S.-based manufacturer that provides modular, data-smart commercial freeze-dry systems designed to grow with you. Assembled in the heart of the Midwest, our freeze dryers are built solid and simple to run, with real-time insights that make it easier to produce quality products for your brand.
