

FOR IMMEDIATE RELEASE

Meritech Helps Companies Improve Employee Hygiene GMPs — with New Innovations in Automated Handwashing and Footwear Sanitizing Systems

GOLDEN, CO / Jan. 19, 2017 – Meritech, manufacturer of the world’s only fully-automated, touch-free handwashing systems will be exhibiting at 2017 IPPE in Atlanta Jan. 31-Feb 2 at booth # B-5874 — with a variety of automated handwashing and footwear sanitizing products onsite so at-

tendees can experience our technology-based approach to employee hygiene. Meritech offers a full line of products designed to meet increasingly stringent food safety standards and regulations related to employee hygiene.

All CleanTech automated handwashing systems deliver an effective 12-second wash and rinse cycle, removing 99.98% of dangerous pathogens from hands. Meritech products use 75% less water, require less soap/sanitizer, and reduce discharge waste, compared to equivalent manual handwashing.

Listeria and salmonella outbreaks are the biggest fears in the food industry today, making effective employee hygiene at critical control points essential. Meritech offers the best guaranteed preventative measures through its automated systems. Efficient footwear sanitizing — especially when combined with simultaneous handwashing

— can reduce or eliminate the spread of these and other pathogens. Meritech’s automated handwashing with new optional footwear sanitizing pan guarantees clean hands and sanitized shoes in 12 seconds. Getting employees back to work faster.

Our new automated XFA walk-through sanitizing pan offers high-throughput soles-only sanitizing for any type of footwear. This system is ideal for facility and production area entryways — stopping pathogens from ever entering your clean zones.

All Meritech products are designed and manufactured in Golden, Colorado. The company ensures that your equipment is always effective by delivering best-in-class, proprietary chemicals and providing no charge, onsite scheduled calibration by its team of Service Engineers.
