### Agro BioSciences Expands Strain Portfolio

**November 15, 2016 (Milwaukee, WI):** Agro BioSciences, Inc. announced today the expansion of their proprietary microbial portfolio, with the addition of two new *Bacillus subtilis* strains. Researchers identified the strains as beneficial probiotics due to their unique properties to work in poultry production systems.

These new *Bacillus* strains further strengthen the Agro BioSciences portfolio and add to the “Microbial Terroir” program. “Research shows that ‘on farm’ challenges shift over time. It’s important that our research is constantly searching the terroir to identify new strains to combat emerging challenges and improve efficiencies,” said President Tom Rehberger.

The fastest growing section of the US Poultry production industry continues to be “organic” and RWA (raised without antibiotics). “Multiple market discontinuities continue to drive US poultry production and have fueled a surge for sustainable and non-medicated feed additives. Our Microbial Terroir program is designed to meet those changing needs,” said Vice President of Poultry Sales Chris Kromm.

### About Agro BioSciences

Agro BioSciences provides innovative microbial solutions for agricultural and human health needs. With research as a cornerstone of its mission, Agro BioSciences is focused on developing novel, science based products using next generation technology to identify the distinct and beneficial microbial terroir from complex microbial systems ranging from the human and animal gut to fresh packaged foods.

Founded in March of 2013, Agro BioSciences is located in the Technology Innovation Center in the Milwaukee County Research Park. Visit [www.agro-biosciences.com](http://www.agro-biosciences.com)
