

New scientific data for Anco®FIT Poultry at IPPE

Anco®FIT Poultry is a Gut Agility® activator and designed for competitive poultry production for antibiotic reduction in poultry diets. The unique gut agility concept in Anco®FIT empowers animals to adapt to nutritional stress factors efficiently.

As part of a series of scientific product evaluation trials, Anco®FIT Poultry was tested for its efficacy and some of the underlying mechanisms for mode of action at the University of Athens in Greece.

Dr. Kostas Mountzouris, Associate Professor of Animal Nutritional Biotechnology Agricultural University of Athens in Greece, will be presenting the latest scientific findings with Anco®FIT Poultry at the IPPE scientific forum in his paper: “Effects of dietary inclusion level of a phytogetic premix on broiler growth performance, nutrient digestibility, total antioxidant capacity and gene expression of antioxidant enzymes”.

The oral presentation of the scientific data will take place in the METABOLISM & NUTRITION - FEED ADDITIVES session on Tuesday 1/30/2018 9:45 AM in B314 of the Georgia World Congress Center.

Find out how Anco®FIT Poultry can benefit profitable and safe poultry production. Take the next step towards a more agile operation to maintain a competitive edge.
