**BLÜCHER at IPPE with HygienicPro Drainage  
Solutions for the Food & Beverage Industry**

**Spindale, NC**—November 13, 2016—BLÜCHER will be in Hall C, Booth 925 at the 2018 International Production & Processing Expo with a line of drains and channels specifically designed to meet the stringent sanitation and efficiency demands of food processing and beverage production facilities.

With their smooth interiors constructed of Type 304 or 316 stainless steel, BLÜCHER HygienicPro® drains promote excellent water flow and solids removal to prevent the growth of *Listeria*, *Salmonella*, *E. coli*, and other bacteria that cause food-borne illness. The design and construction of HygienicPro drains and channels promote drain self-cleaning and ease routine cleaning. As a result, the drains can be thoroughly cleaned with minimal water and little production downtime to significantly reduce the risk of bacterial growth.
