From the beginning, BioSafe Systems has lead the way with providing green and sustainable products that work. 'Simply Sustainable. Always Effective.' is not just our tagline—it's the foundation on which the company is built. It has been our goal to work only with products that are highly effective but do not negatively impact the environment or the people that use them.

Our goal is to help growers and producers establish programs that are cost effective and successful, but also sustainable for the environment and the farm. We believe in a "farm to fork" approach, providing safe and effective products for every step of the process. As a family business, BioSafe Systems is committed to building relationships with our end-users while providing education and product research. We frequently work with universities and extension organizations to conduct field research and studies on the effectiveness of our disease and pest control products.

BioSafe Systems is one of the country's largest manufacturers of peroxyacetic acid (PAA), with four manufacturing locations spread across the country. Unlike other pro-

ducers of PAA products, BioSafe Systems is an integrated agricultural services company. This means that we understand the complete agricultural environment from slaughter and processing, to on-the-farm animal health, feed production and water management. We are a family-run, customer-centric company dedicated to providing our customers quality products and top service excellence.

*"Our goal is to help growers and producers establish programs that are cost effective and successful"*

BioSafe Systems' SaniDate line offers 4 products formulated for specific uses and applications within the poultry industry:

**SaniDate® 5.0** – An EPA and OMRI certified sanitizer/disinfectant specifically labeled for all sanitation and disinfection applications within hatcheries, egg production, grow out, slaughter and food processing plants. Also use for water line cleaning and water treatment in livestock production.

**SaniDate® 15.0** – A highly concentrated chemistry designed for use in commercial, institutional and industrial operations. A proven hard surface sanitizer for food and non-food contact surfaces fights against both pathogenic and non-pathogenic organisms in federally inspected meat, seafood and poultry processing facilities, egg production and packaging plants, poultry and livestock housing and hatchery rooms. Additionally, SaniDate 15.0 may be used for line cleaning for poultry and livestock watering operations.

**SaniDate® FD** – 15% PAA microbicide developed for use in Federally inspected meat, poultry, and seafood processing facilities. This product aids in reducing contamination and cross-contamination of edible food products. This product is intended to be used as an antimicrobial agent to control microorganisms in process water and ice used in the production and preparation of poultry, shell eggs, meat, processed meat, preformed meat, fish and seafood.

**SaniDate® FD PLUS** – 22% peroxyacetic acid-based microbicide.
