

Compost Cat for the Broiler Industry

For 15 years, the Compost Cat has been an iconic performer in the egg industry as a high-rise house windrow manure turner. Now, Aggero presents a Compost Cat tuned to tackle the demands of the broiler industry, start to finish.

Growers constantly balance the need to provide a healthier environment with saving time and money.

The Compost Cat does both. Our simplified windrow process refreshes litter, saving on fresh bedding and chemicals, and burns off ammonia and pathogens, minimizing disease and maximizing air quality.

Improvements include a higher horsepower engine and fifty percent more auger power, and an aggressive auger design rapidly collects caked litter and shreds it into a windrow in minimal time. At over ten feet wide, the collector head creates two large windrows with fewer passes. Additional features specifically designed for the broiler house include side-conveyor and spreader disk add-ons that attach with a hook and pin system for quick set up.

Our manufacturing process is streamlined to minimize customer costs. See us at the 2017 IPPE in Booth B8375 for a special expo purchase discount. Aggero “The new standard in waste management.”
