

Corti Zootecnici

"Amongst the 14 standard nipple drinkers offered by Corti (Booth B8715), the new 4004 is the one set to have the front line. This full-metal drinker, developed to offer the lowest opening force possible at 1 (*one!*) gram, has also been fine tuned to be able to work with higher water columns and deliver water flows up to 120 cc/min, making it a perfect fit for all the life stages of your flock.

As all our drinkers, the 4004 is offered both trayed or as part of assembled drinking lines, making Corti the one-stop-shop for drinking systems. Moreover, as the whole Corti product range (including drinkers, pressure regulators, piping and fittings), the 4004 comes from a single productive center in Italy handling from design, prototyping and tooling to final assembly and testing. This means that beside rapid handling of the orders also an efficient product customization is possible, with our custom-specs drinker being something worth learning about for all poultry systems integrator."
