PRESS RELEASE

Exclusive Plastic Pallet More Durable Than All Other Pallets on the Market

Craemer CR4-5 Pallet Proven To Last 500+ Loops

Craemer Group, one of the world's leading manufacturers of high-quality, long-lasting plastic pallets, announces their CR4-5 plastic pallet made from high-quality polyethylene was recently quality tested by Virginia Tech and proven to last more than 500 loops, making it one of the most durable plastic pallets on the market.

The CR4-5 underwent a series of durability and quality tests over the course of four months at Virginia Tech. Using the FasTrack Simulation, the pallets were tested for structural durability and the extent of their use, going through simulations of rough handling, including a 3,000-pound forklift and a 4,000-pound pallet jack, tested at various speeds with a dummy load of 1,500 pounds. All evaluated Craemer CR4-5 pallets successfully survived 500 FasTrack cycles without experiencing any damage or failure. This proves that the CR4-5 is sturdier and more stable than any other pallet on the market.

The durable plastic pallet is manufactured for universal use across a variety of industries, but its closed-loop, hygiene-first focus makes it ideal for food and pharmaceutical environments. Wood pallets average failure after only eleven cycles, while the CR4-5 is now proven to last more than 500 loops.

The made-for-U.S., 48" x 40" CR4-5 is 100% recyclable, easy to clean and reduces production downtime with no splinters or dust from wood. With its one-piece design, the CR4-5 is sturdy and the ideal choice for handling heavy-duty loads in high rack warehouses or within automated processes. Palgrip® anti-slip strips on the top deck ensure maximum safety, even in damp conditions or inclined positions.

Craemer Group at IPPE

The Germany-based Craemer Group, specialists in metal forming, plastics processing and tool making, was founded in 1912. Today, the internationally active family company has four European production sites and a global network of its own sales offices including an operations facility in North America. In 2021, the world's leading manufacturer of plastic (intra-)logistics solutions achieved a total operating performance of 320 million USD with

approximately 1,000 employees. Craemer will be presenting their CR4-5 and other plastic pallets at IPPE (January 24 - 26, 2023) in Atlanta in hall BC, booth BC9951.
