PRESS RELEASE

FOR IMMEDIATE RELEASE

November 22, 2016

Diversified to Unveil Line of Fiberglass Composite Fans at 2017 IPPE

Eatonton, NJ—A revolutionary fiberglass composite exhaust fan will be unveiled by Diversified at **booth #B6875** during the 2017 International Production and Processing Expo. The highly anticipated fan is positioned to extend fan longevity with its fiberglass composite construction that will not rust or corrode.

The 55 inch **DI Fan** with variable speed option will be displayed for the first time during the IPPE, allowing visitors to experience the quick replacement belts, heavy 3 paddle aluminum blades and corrosion-resistant fiberglass composite construction. The DI Fan also features an industry-leading air flow ratio, even under high static pressure.

As part of Diversified's complete ventilation solution package, booth visitors can learn about the 36 inch direct drive fiberglass exhaust DI Fan, DI Basket Fan, updated **DI Tunnel Shutters** with 2-inch-thick coated-galvanized steel insulated with foam-filled Expanded Polystyrene, and the DI Vent, a high performance inlet vent system with an extremely competitive price point.

Like the Tunnel Shutters, the **DI Vent** has a 2 inch thick door with an R-9 insulation value—the highest in the industry—for significant energy savings. The DI Vent also features stainless steel corrosion resistant hinges and an angled lip for added air throw, and provides an air-tight seal against any house wall. The DI Vent's optional maintenance-free torque tube drive system eliminates the need to replace stretched cables, and when paired with the DI Drive, the vents can provide completely automated control during brooding.

Another new product being unveiled during the IPPE is the **InjectRite** peristaltic pump for fully automatic, proportional dosing ratios between the mainline and the water additive. With an injection frequency eight times more than the competition, the InjectRite delivers highly accurate, smooth, repeatable blending combined with the lowest maintenance requirements in the industry.

Cleaner eggs, drier litter and fewer floor eggs top the list of benefits for the **DI Nest / Nest O Matic**, a new type of slatless community nesting system that will be available at the Diversified booth during the IPPE. The easily accessible, spacious nests boast improved ventilation for drier litter, cleaner eggs, and improved fertility and

hatchability. The DI Nest's retractable legs enable simple height adjustment for bird training and the lifting system makes clean-out between flocks easy.

For more details on Diversified's complete line of products, go to DiversifiedImports.com or visit booth #B6875 January 31 through February 2 at the Georgia World Congress Center.
