

Dorset Green Machines Drying System

Farmer Automatic of America is a distributor of Dorset Green Machines. Offering Poultry Drying systems, Pelletizers with sanitation and bagging systems. Dorset Poultry Manure Dryer reduces particulate matter emissions from the barn air. The dosing belt delivers the manure on the smooth plates. This eliminates any necessity for pre-drying of the wet manure resulting in lower operational cost. The drying system reduces dust as fine dust is filtered from the house as air passes through the manure on the drying trays. Sanitation is provided to assure elimination of semolina and e coli. The dryer has 1 to 6 tiers of trays operated by a heavy duty chain. The drying starts at the top tray and zig zags back and forth as it drops the manure down to the bottom tray. Here it is removed by an auger system from the dryer. Manure is removed from the barn on a daily basis. Pelletizers are offered in five sizes which include intake bunker, augers, crusher, dosed input frequency control, pellet press, sanitation, cooling and elevators. If you purchase the bagging system it will weigh, fill and seal your pellet bags for you. Dorset experience is second to no one in the industry. That experience makes these systems truly your best choice when selecting a dryer. As we know experience is the best teacher.
