PARTNERS IN GRIME FIGHTING

Douglas Machines Corp. Sought Custom Solution for Scale Parts Cleaning

Clearwater, FL, February 4, 2019 — It’s not often that companies are able to partner together and build a solution for the industry. Douglas Machines Corp. has developed in cooperation with manufacturers of multi head weighers, a line of scale parts washers designed to quickly and efficiently wash, rinse and sanitize weigh hoppers, chutes, grinders, sorters, augers and feeder pans.

Changeover time is significantly reduced because the hoppers and feeder pans of most weigh scales can be cleaned in only one batch. Using the shortest wash time, the machines can process up to 10 batches an hour, maximizing the rate of operation and using as little as 120 gallons of water per hour.

The Douglas Scale Parts Washer 1536-SPW will be operational at Booth #B4000

Website Link: <https://www.dougmac.com/scale-parts-washers/>

Machines are built to order, with customers offered a variety of options and upgrades to meet the changing needs of the industry as well as meeting company design preferences.

Partnering not only on the design of the scale parts washers, Douglas Machines has worked with manufacturers like Multipond, Ishida and Yamata to provide quality, custom wash racks designed to securely wash their scale parts. Douglas is the only company offering these scale parts custom racks for washing, transporting and storage.
