

**For Immediate Release****November 22, 2017****East Iowa Plastics, Inc. introduces a new size of our *PAKSTER™* Light Shield**

In addition to our 48" *PAKSTER™* Light Shield, East Iowa Plastics, Inc. has introduced a 24" *PAKSTER™* Light Shield.

East Iowa Plastics, Inc.'s *PAKSTER™* Light Shield is a very effective and high quality answer where light control is still a critical concern.

Our *PAKSTER™* Light Shields are designed to fully cover all heights of 24-inch (OC) and 48-inch (OC) ventilation doors on the market, and is deep enough away from the wall to allow 100% air flow through from the bottom side, away from the sun. This allows for the fullest amount of sunlight protection, no matter how large the door, with the only light being allowed coming from the underside of the shield. Furthermore, the curvature of the shield provides for smooth, turbulent free air being directed through the door.

This product is made from the finest materials available, using heavy gauge High Impact Polystyrene (HIPS) with a Korad Acrylic veneer on the outside surface. It is this acrylic veneer that gives this product its long life, it is nearly indestructible to sunlight and any other weatherability issues. Korad Acrylic is heavily used in the agricultural implement and trucking industries (cabs and hoods). Not only will this Light Shield last nearly indefinitely, it will also nearly indefinitely look as good as the day you bought it.

**Need dark out?**

If complete black out conditions for your ventilation doors are needed, our *PAKSTER™* Light Shield is designed to include a custom fit Light Trap from Dandy. The Dandy Light Trap fits into the lower portion of the new Light Shield, well ahead of the air flowing into the door. The combination of the *PAKSTER™* Light Shield with the Dandy Light Trap makes for an ideal combination for minimizing all light along with maximizing efficient, high volume air flow.

Join us at booth B7826 to view our entire line of *PAKSTER™* products, including our "Phillips" Egg Flats, Rectangular, Contour and Square Feeder Lids, Ventilation Doors, Light Hoods and Light Shields. You will also see examples of our Custom Thermoforming. Our products can also be found on our website: [www.eastiowaplastics.com](http://www.eastiowaplastics.com).
