New product: Coded quick-release couplings

Eisele offers fool-proof INOXLINe push-in fittings

The stainless-steel fittings from the INOXLINe were developed by Eisele especially for use in hygiene-sensitive areas. Now the German-based company has expanded the successful series to include coded quick-release couplings.

With the new coded quick-release couplings Eisele offers fool-proof stainless-steel connection components for compressed air. The connectors of the INOXLINe series consist of a coupling and a plug nipple of the product groups 4031 and 4034. They are manufactured from stainless steel 1.4404 (AISI 316), are equipped with FDA-compliant seals, and prevent the penetration of contamination through the outer contour in connected state. This makes them ideal for use in food environments. The durable connection elements are designed for operating pressures from 7.25 to 145 psi.

Eisele offers the quick-release couplings in four versions: with round, triangular, hexagonal or octagonal plug coding. An optional shut-off on both sides offers even more safety.

About Eisele Connectors:

Eisele Connectors Inc. is a subsidiary of Eisele Pneumatics GmbH & Co. KG, which emerged from a German company founded in 1939. With more than 75 years of experience in precision machining, Eisele is one of the world's leading suppliers for high quality all-metal connectors and customized connector solutions.

Drawing from the company's proven German manufacturing expertise; Eisele's North American facility keeps an ample stock of products and can optimally supply its customers and respond quickly to fulfill needs. The company is part of a global logistics network that guarantees fast availability of products to the global market and is a member of the American Welding Society (AWS), the Society of Automotive Engineers (SAE), the Society of
