**November 2016**

Enerco Group, Inc. is excited to announce the launch of the *new* **JET** line of Agricultural Radiant Tube Heaters at the 2017 IPPE Show in Atlanta. It is well established that traditional 40' and 50' radiant tube heaters yield floor temperatures that decline rapidly as the heat travels laterally away from the tube center line. This is true of all brands we tested.

The *new* **JET 25** model uses a unique 'jet like' flame and a 25' tube system to provide the most even floor temperatures in poultry broiler house installations. The **JET 20** also delivers a more consistent heat footprint with a 20' tube lengths.

Visit us at Booth **B8412** in Hall B to learn more about how **JET 25** and **JET 20** Heaters can cost effectively provide your broiler houses with the most even floor temperatures.
