FarmLab Innovations Highlights SWASH™ Products at IPPE to Increase Sanitation, Ventilation and Reduce Labor Costs

In 2018, the company saved farmers 4,789 hours of labor with an innovative line of products called SWASH™

CHATTANOOGA, TENNESSEE— FarmLab Innovations is eagerly anticipating the IPPE Conference in Atlanta on February 12th through the 14th. The team at FarmLab Innovations encourages participants to visit their booth, C-11171, where they'll be presenting crucial information for broilers and growers regarding sanitation, labor, and ventilation. In 2018, the company's SWASH™ product line saved farmers 4,789 hours of labor, as well as 1.7 million gallons of water.

SWASH™ is a carefully formulated liquid that boosts sanitation levels in poultry and swine houses. SWASH™ alters dust, soil and waste's ability to build up on surfaces, while inhibiting the formation of organic films. The product increases sanitation levels and cuts required cleaning time by up to 50 percent, leaving you with more time for other aspects of animal care. Swash™ comes in three specific formulas, each with a composition specifically tailored to work most effectively to clean and protect surfaces.

Booth visitors can learn more about incorporating SWASH™ products into their own sanitation routines, and will have the chance to meet Field Application Consultant Drew Sanderson. Sanderson has a wealth of experience when it comes to applying FarmLab Innovations products in poultry houses, and will be available to answer questions about technique and usage. The experts from FarmLab Innovations will also be available to discuss how their products can reduce the serious hazards associated with dust buildup on brood heaters.

To learn more about how FarmLab Innovations and SWASH™ products can increase your sanitation and ventilation while decreasing your labor costs, be sure to visit booth C-11171 at the IPPE Conference in Atlanta.

###

FarmLab Innovations is committed to bringing their lab to your farm in order to provide practical solutions for the problems that growers face. FarmLab Innovations is proud to be a part of the Piedmont Chemicals family, which offers over 80 years of industry experience. Drawing on the collective 200 years of expertise of their scientists, FarmLab Innovations is able to provide cutting-edge products to make your sanitation regimen easier, while reducing necessary labor and water usage.
