FarmLab Innovations COO To Deliver TechTalk on Innovative SWASH™ Products During IPPE Conference

FarmLab Innovations COO Kevin Hrebenar will speak on February 12th about the company's cutting-edge product line specially designed for boosting sanitation and cutting cleaning time.

CHATTANOOGA, TENNESSEE— FarmLab Innovations COO Kevin Hrebenar is set to deliver a TechTalk presentation on February 12th at 1:50pm in Hall C Room 9123 during the IPPE Conference in Atlanta. The address will highlight the company's innovative SWASH™ product line, which has proved crucial in boosting sanitation for broilers and growers, reducing the manpower necessary for maintaining proper sanitation, and reducing water usage. Hrebenar will discuss how FarmLab Innovations products can increase sanitation levels and cut required cleaning time by up to 50 percent.

The presentation will cover the various SWASH™ products that are currently available, including Dust Repel, House, and LiveHaul, as well as proper application techniques and usage for these products. Attendees will also hear details about the composition of the products, plus where they're used most effectively. Hrebenar will show captivating before and after photos that drive home just how effective SWASH™ is at cutting labor costs and preventing unwanted organic matter from sticking to surfaces such as exhaust fans. Those looking to make sure their cleaning routine packs a powerful punch should make a note to add this presentation to their schedules.

###

FarmLab Innovations is committed to bringing their lab to your farm in order to provide practical solutions for the problems that growers face. FarmLab Innovations is proud to be a part of the Piedmont Chemicals family, which offers over 80 years of industry experience. Drawing on the collective 200 years of expertise of their scientists, FarmLab Innovations is able to provide cutting-edge products to make your sanitation regimen easier, while reducing necessary labor and water usage.
