## **Global Industries To Unveil New All-Steel Trussed 'APEX' Poultry Building at 2017 IPPE Atlanta Show**

*Grand Island, NE* – Global Industries, Inc. has announced that an innovative new poultry building design will be officially unveiled at the 2017 International Poultry Expo, scheduled to be held at the Atlanta's World Congress Center January 31st through February 2<sup>nd</sup>.

"Global Industries has successfully marketed an all-steel clean-span poultry building in many International markets for a number of year," according to Global Industries Vice President of International Sales John Haugh. "But many of our customers are more accustomed to truss frame designs and have repeated asked if we could develop an all-steel truss building. I'm happy to now be able to tell them 'yes'."

Known as "APEX" the new trussed poultry building features many of the same high-quality benefits of the clear-span model, including 29-gauge steel roof and sidewall panels that are more sanitary and easy to clean than other materials; all bolted construction with no welding required; roof structures engineered to support all attached equipment and standard building widths ranging from 10m to 16m.

Like the roof and sidewall panels, the trusses bolt-together for fast and easy erection. Additionally, the galvanized steel framing provides maximum anti-corrosive protection and Global Industries provides a variety of fabric or steel suspended ceiling, with radiant barrier, fiberglass or cellulose insulation packages available.

Other available options include choice of several standard control room sizes; 1m wide by requested length cooling chambers with access doors; framed fan openings in sidewall and/or endwall to customer specifications and either open or fully enclosed sidewalls based on customer preference.

"APEX is engineered to meet all applicable load factors and will be marketed both within selected regions of the United States and Internationally" Haugh said. "We're extremely excited to provide this new design to our customers, as it offers a tremendous number of advantages over existing designs."

The APEX will be on display at the Global Industries exhibit at the IPPE '17 event, Booth #B8645.
