

## IPPE 2018 Press Release

START

### **Greengage returns to IPPE 2018 to launch new poultry lights, sensors and web app with malt whisky tasting**

New products making their debut at IPPE 2018 mark the start of a new chapter for the Scotland-based agri-tech business as it now provides an integrated platform that includes the original core product ALIS™ LED lighting.

Greengage is committed to solving the increasing challenges in global food production by applying the science of light, research and patented technology to a new range of innovative LED lights, sensors and data analytics.

Sensors clip on to the same ALIS™ (Agricultural Lighting Induction System) induction power cable used for lighting in livestock sheds, creating an aerial network of lights and seven sensors looking down on the animals; monitoring critical parameters for welfare, productivity and the environment.

Sensors include: temperature, light, humidity, CO2, ammonia, thermal imaging and acoustics.

Visit our stand B5911 in Hall B to view working demonstrations of our new product line-up and see for yourself, while enjoying a wee dram of Scottish malt whisky, how Greengage can improve productivity and animal welfare on your farm.
