HR Green Provides Wide Range of Water Services at Cargill, Inc. Plant

HR Green offers specialty resources in Industrial Water and Wastewater Treatment. We assist clients with studies, design, permitting, and construction. We work with clients to provide treatment solutions that comply with corporate procedures and policies while offering sustainable solutions that add to the bottom line.

Cargill, Inc. provides food, agriculture, financial and industrial products and services to the world. HR Green's relationship with this 150 year old company began in Eddyville Iowa when Cargill purchased the abandoned Iowa Southern Utilities Bridgeport Power Station. Cargill refurbished the boilers and turbines, added a new stack, installed new coal and ash handling facilities, and turned the old power plant into what was to become the heart of a new, multi-million-dollar processing complex.

HR Green provided engineering services associated with surface and groundwater raw water supplies, potable and process water treatment and storage, fire water pumping and storage, sanitary and process wastewater treatment, and solid waste (fly ash and waste gypsum) landfill disposal. Also provided was a wide variety of environmental engineering and planning services for the Eddyville facility, including Phase I Environmental Site Assessments, Spill Prevention Control and Countermeasure (SPCC) Plans, Storm Water Pollution Prevention Plans, Integrated Hazardous Waste Management Contingency Plans, Chemical Storage Facility design, Solid Waste Comprehensive Planning, and NPDES and other associated environmental permitting. Over the years we have provided services for over 70 individual projects.

HR Green continues to provide a wide variety of consulting services at Eddyville, confirming the strong relationship originally established more than 30 years ago with Cargill's operating and management staff.

Originally founded in 1913, HR Green has offices throughout the United States. HR Green offers specialty resources in Industrial Water and Wastewater Treatment. We understand the differences in industrial wastewater and water treatment and are accustomed to high strength waste. We provide viable, successful and sustainable solutions to all of our clients.
