

Harpak-ULMA Announces New Reduced Scrap System for Cryovac® Darfresh® Rollstock Packaging

A 40% scrap reduction is now possible on the ULMA TFS 407 R Thermoformer. With the reduced scrap width, the vacuum cycle speed can be increased by more than 12%. A better vacuum seal is achieved due to specially designed vacuum slots combined with top and bottom Darfresh® webs. Other features of this package include easy-open, shaped cuts and Eurolock hanging hole. Packages may also be microwaved.

Harpak-ULMA is a supplier of primary and secondary packaging equipment and systems.
