## KML presents the first IP69K tested Corrosion Resistant Mounted Bearing Units

**Pottstown, PA** – January 4, 2019 – KML Bearing USA has married their revolutionary KML Stand-Out Housing design with the ground-breaking Poly-Guard IP69K Seal System to produce a benchmark product that meets the requirements of IP69K test criteria. This new design meets the needs of Food Equipment Hygienic Design and Clean-in- Place (CIP) criteria.

The IP69K rating provides protection against the ingress of dust and high temperature, high pressure water; thereby, making products with this certification ideal for use in conditions where equipment must be cleaned and sanitized. In food processing industries where, hygienic design and sanitizing are paramount, the **KML Poly-Guard IP69K Sealing System** provides the first ever sealing system to provide IP69K washdown protection.

KML Bearing USA will be in Hall B, Booth 5764 at the 2019 International Production & Processing Expo held in Atlanta February 12-14, 2019.

### About KML Bearing USA

Offering 40+ years of bearing development and fabrication expertise, KML Bearing USA can provide the best possible combination of Washdown Rated Corrosion Resistant Bearing Products for most applications. With substantial inventory-availability coupled with reliable supply chain logistics, all KML Food Service Application Products offer Tier One Features and Benefits at competitive prices. KML Corrosion Resistant Products also provide cost reductions for OEM, MRO and end-user alike.
