FOR IMMEDIATE RELEASE

## Maxi-Tronic, Inc. Introduces MaxiScan™ 24

Loveland, OH, November 27 – Maxi-Tronic, Inc.’s new MaxiScan™ 24 has been announced by Scott Chant, President.

MaxiScan 24 leverages current technology to provide more advanced features in a smaller enclosure than ever before. MaxiScan 24 accepts up to 24 sensor inputs for essential protection of elevators, conveyors and other equipment. Alarming, logging and graphing is displayed on an intuitive touch screen, avoiding a complex user interface, user manual, and installation.

MaxiScan 24 monitors bearing, surface-mount temperature, belt misalignment, flow and other sensors. Each temperature sensor has individual set-points, and there is real-time graphing for each sensor.

With Internet access MaxiScan 24 has built-in automatic text and email alert delivery to multiple recipients in the event of an alert or alarm condition. The recipients have immediate access to the MaxiScan data from any web enabled device including cell phone, tablet and PC. All warnings, alarms, logins, and overrides are automatically logged and archived. The system is password protected.

MaxiScan 24 can be installed standalone, integrated with MaxiTrack™ software, or with a PLC system, hard wired or wirelessly. It has both Modbus and RS485 outputs.

MaxiScan 24 will be on display at IPPE in the Safe-Grain / Maxi-Tronic booth B7261. For more information email [info@maxitronic.com](mailto:info@maxitronic.com) or call toll-free 800-659-8250 in the USA.
