

Latest innovation in PAA testing

During IPPE 2019, Palintest is delighted to introduce the Latest innovation in PAA testing. Palintest PAA test kit offers a simple and digital test covering 2-2000 ppm of PAA, which combines laboratory grade results with full traceability in a portable device that is simpler to use than a drop count kit.

Operating Principle

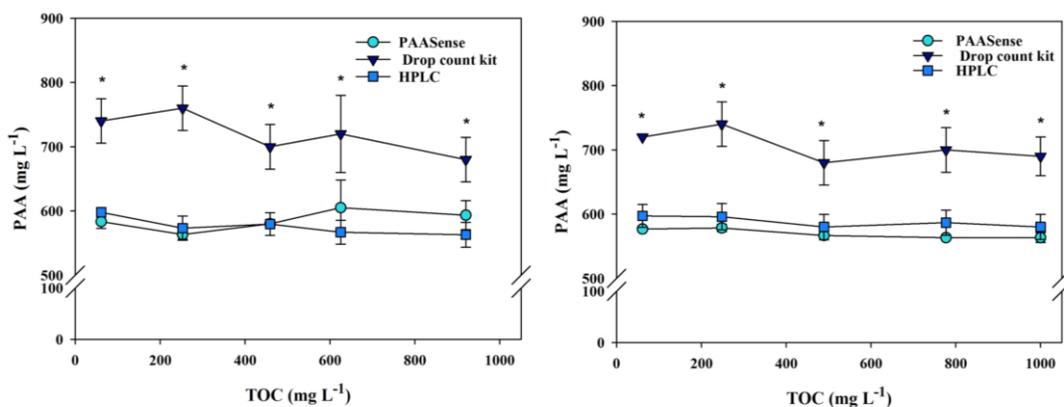

The PAASense uses disposable chrono-amperometric sensors, which measure electrical current proportional to the PAA concentration, without interference from hydrogen peroxide. The instrument display gives a direct reading of the result in mg/L (ppm) which is digitally logged for full audit traceability.

Unique features:

- Simple method with minimal training required
- No affected by sample color, turbidity or solids
- No glassware, chemicals or reagents
- Rapid digital reading in 60 seconds
- Objective test reduces user variability while increasing repeatability and traceability

Laboratory grade in-field test kit:

In independent testing PAASense has shown performance equivalent to HPLC – a gold standard laboratory technique, even in the presence of increasing organic contamination.

A little about Palintest

At Palintest we make water analysis technologies which help to safeguard consumers around the world each day.

Palintest has a long history of innovation. Beginning with Dr Palin who pioneered the use of DPD for field analysis of free and total chlorine; making water analysis accessible to all.

Building on the philosophy of Dr Palin, we are continually evaluating new and existing technologies to make water testing simple and accessible for everyone. Over the years we have developed a number of market firsts and we continue to push the boundaries of innovation to improve water quality for everyone.
