Pulsafeeder has your solution for disease free, healthy animals.

Pulsafeeder, a worldwide leader in chemical feed & process instrumentation technology, has provided diaphragm & peristaltic metering pump solutions for decades. Pulsafeeder continues to set the standard for accuracy, reliability and safety.

For over 75 years, Pulsafeeder has been manufacturing chemical metering pumps, water treatment controllers, for pH, ORP and conductivity control, pre-engineered systems, for a complete turn-key water dosing system, and a wide variety of accessories. You may recognize some of our brands such as PULSAtron, Chem-Tech, BLACKLINE, Mec-O-Matic and MicroVision.

Pulsafeeder has built an impressive record of success in thousands of fluid handling applications. Our products can be used in potable water treatment, feed water antibiotic, egg production cleaning and sanitizing, grow-out to process, to medication & antimicrobials of livestock drinking water, **Pulsafeeder has your solution for disease free, healthy animals.**

PULSAtron diaphragm metering pumps range from 3 - 600 gpd (0.5 – 94.6 lph) and 30 – 300 psi (2 – 21 bar)

Pulsafeeder simplifies diaphragm metering pump technology. For over 25 years, the PULSAtron product line has evolved into philosophy of design that continues to set the standards for the entire industry. Our engineers have developed a guided check valve system with a proven 'seat and ball' design that ensures reliable and accurate metering year after year.

Our fin cooled Solenoid enclosure dissipates heat ensuring that the pressure handling capability of the pump can be maintained. The thermally protected Solenoid protects the pump from seizing up in extreme heat conditions with an automatic reset feature allowing the pump to resume operation upon cool-down. All PULSAtrons are tested and rated under hot conditions guaranteeing that the flow and pressure ratings meet the specifications.

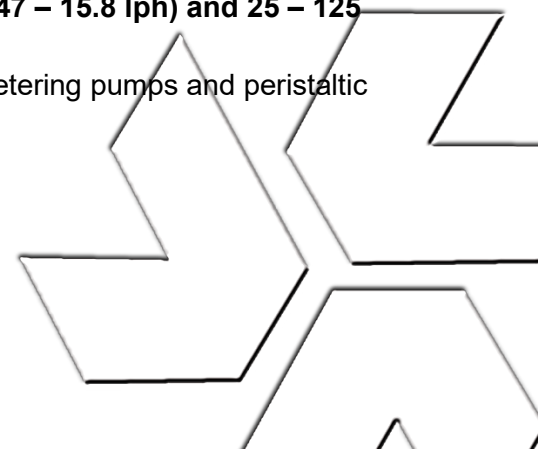

The key element which differentiates these pumps from other types is the TFE lined elastomer diaphragm. This diaphragm is sealed against the reagent head forming a seal-less, leak free pumping chamber.

CHEM-TECH Diaphragm and Peristaltic Pumps range 3 - 100 gpd (0.47 – 15.8 lph) and 25 – 125 psi (1.7 – 8.6 bar)

The CHEM-TECH family is comprised of either mechanical diaphragm metering pumps and peristaltic metering pumps.

Quality Products, Trusted Solutions

Pulsafeeder is a Unit of IDEX Corporation

Diaphragm Pumps- The key element which differentiates these pumps from other types is the elastomer diaphragm. This diaphragm is sealed against the reagent head forming a seal-less, leak free pumping chamber.

Peristaltic Pumps- The head on a peristaltic pump consists of a piece of tubing and a roller assembly that moves chemical around the circular head. The engineered composite, three piece roller assembly reduces friction, while allowing a greater load capacity and longer tube life. No tools are required to remove the tubing; Stainless Steel wing bolts allow for quick and easy tube replacement when needed. Peristaltic pumps are also inherently degassing for applications using gaseous chemicals.

Pulsafeeder works hard to provide the best products and support for our customers. With our global sales network, Pulsafeeder assures that products & local support are available for your needs. Pulsafeeder is continuously focused on providing world-class products and customer service.
