

Press Release: November 21, 2018.

The LevelMaster Sensor for Precise and Reliable Control

Precise level control can be accomplished using the 4-20mA output. This high-performance sensor is safe for both the food and pharmaceutical industry. The sensing face is durable in PEEK and the sensor body is NPT ½" in stainless steel. These materials are FDA approved. The sensing face can operate in materials up to 100°C and the housing is IP69K. CIP 121°C is standard.

The high-performance electronics also includes Easy Teach by Wire (ETW). Very simple and efficient. The settings are held in the program memory.

Need to detect foam? This sensor can easily do that.

Need to ignore foam and detect the product level? This sensor can easily do that.
