

Rice Lake Demonstrates Meat and Feed Production Weighing Solutions at IPPE 2019

Rice Lake, Wis.—Rice Lake Weighing Systems will demonstrate washdown and metal detection weighing solutions at the International Production and Processing Expo (IPPE), at the Georgia World Congress Center in Atlanta, February 12-14, 2019. Visitors to booth B6153 will see Rice Lake's extreme washdown BenchMark™ HE-X, RoughDeck® QC-X and CW-90X scales in addition to the MotoWeigh® in-motion weighing and metal detection system.

The BenchMark HE-X bench scale and RoughDeck QC-X floor scale are designed to meet strict sanitary design principles to provide the ultimate washdown capability. Both scale frames are made from solid 304 stainless steel beams connected with continuous welds to ensure a hygienic environment in meat and feed processing facilities. The BenchMark HE-X also has a removeable cover and IP69K rated load cell to withstand high pressure washdowns. The top deck on the RoughDeck QC-X opens 75 degrees so the entire scale interior can be washed and sanitized. The CW-90X over/under washdown checkweigher is made to meet Hazard Analysis and Critical Control Points (HACCP) requirements with an IP69K rating and hermetically sealed load cells. The CW-90X indicator enclosure is breathable, but watertight, so it will function accurately with no fear of water damage in extreme washdown situations.

Booth B6153 visitors will also see demonstrations of Rice Lake Weighing Systems' MotoWeigh in-motion checkweigher and metal detection system. This system detects the smallest traces of metal contaminants in products and diverts them from the processing line. Rice Lake will also be displaying several balances for precise measurements.
