

FOR IMMEDIATE RELEASE

Saeplast Americas Inc. creates a reusable and sustainable meat log container

As part of our parent company Rotovia's strategy to create long term reusability options in our proprietary Saeplast PE product line, Saeplast Americas Inc. is pleased to offer the food processing market an employee safe, food safe, land fill free reusable material handling option for moving large meat logs, chubs that allows ease of use and food safety to be top of mind.

The new to the world patented Saeplast PE log coffin, as it is referred to, has been years in the development with one of our closest industry partners. The log coffin replaces the heavy, noisy, and dangerous stainless steel options that are seen in meat chub and log processing plants today. The Saeplast log coffin also replaces the cumbersome and costly corrugated cardboard options used in the market today.

- ✓ The patented 3 piece food safe Saeplast PE polyethylene design creates a reusable option that is employee and food safe
- ✓ Ease of cleaning will allow for savings in water and sanitation costs versus steel options
- ✓ Elimination of landfill disposal need for corrugated cardboard thus saving money on a daily basis
- ✓ Having the ability to safely stack opens up valuable floor space and is safer for employees

Offering the lowest total cost of acquisition the Saeplast PE Log Coffin is a welcome addition to all meat log and chub processing facilities.

About Saeplast Americas Inc. For over 43 years, Saeplast has been providing food grade rotationally molded polyethylene material handling solutions to the fish, poultry, meat, pork and pet food industries throughout Canada, the United States, Mexico and Central and South America from its location in Saint John, New Brunswick Canada
