

Mac SpaceSaver High Efficiency Dust Collector

The revolutionary Mac SpaceSaver dust collector is up to 75% smaller than traditional dust collectors, offering a superior cleaning mechanism and long-lasting, leak-free cartridges.

With a footprint as small as 27-inches x 38-inches, the Mac SpaceSaver is perfectly suited for applications with limited space requirements in terms of both cross-section and overall height—as well as in areas of the plant that aren't connected to central dust collection systems. Many cartridge styles are available to best fit the application, with sizes ranging from 2 to 48 cartridges per collector.

The Mac SpaceSaver uses patented directed air flow fire to thoroughly pulse the cartridges. Superior directed air flow extends cartridge life and uses compressed air more efficiently than competitive models.

Complete tool-free cartridge changeout and a unique blowpipe configuration make maintenance easy and cost effective. Because users can change the cartridge without having to enter the collector, there are no confined space entry issues.
