PRESS RELEASE STEEN F.P.M. INTERNATIONAL

Further developments ST840 pizola machine

After the development of the ST840, further innovation was invested in this current model as more possibilities with the machine were close by. Changing some minor things on the initial design, the machine is now easily converted to a de-boning machine as guides can now easily be set and removed to create this possibility. Therefore, the machine can be easily converted into a de-boning machine for anatomical cut thighs, drums and prime wings.

Next to the actual purpose of making pizola, partially de-boned thigh, from anatomical cut thighs, by rethinking the system, more possibilities were added. Here, different spacers can be used to determine how much you want to retract the meat on the bone. The major advantage that was created with this possibility, is that anatomical cut prime wings can now be turned into a so-called "tulip" where the meat is pushed down the bone and the bone remains undamaged. This also means, that drums can be transformed into this similar product.

More flexibility on the ST850 turkey de-boner

Due to the need of several customers, the ST850 was adjusted to give more flexibility towards the product. This de-boning machine for anatomical cut thighs, drums and prime wings from male or female birds (left or right side), is able to de-bone all the above named parts with a minimum of adjustment with a capacity of 35 pieces per minute. Keeping in mind, that a very large weight range can be de-boned on the same setting, the demand came to de-bone thighs and drums at the same time. Therefore, the pistons are now as standard implemented in the machine where the possibility of processing these thighs and drums from certain sizes on the same general setting is possible. However that each unit will be designated for its specific part, the time that can be saved in production flow is significant.

Customer satisfaction and service

For more information about the above machines or our about our skinners or de-boning machines, our sales team will be happy to provide you with more information and guide you to the right choice for your company. Visit us at booth C-1205 at IPPE 2018.
