Bizerba Introduces the Next Generation GLM-I Weigh Price Labeling System at IPPE 2024: Leading the Way in Food Processing Innovation

Joppa, MD – December 26, 2023 – Bizerba is set to optimize food processing with the North American launch of its advanced GLM-I Weigh Price Labeling System at the International Production & Processing Expo (IPPE) 2024 in Atlanta. This event marks the debut of a series of innovative solutions by Bizerba, each designed to redefine efficiency and compliance in the industrial food sector.

From January 30 to February 1, 2024, at the Georgia World Congress Center, Bizerba's booth C26143 will become a hub of technological innovation. Alongside the GLM-I, Bizerba will also showcase the LabelSecure Basic/G2 and the XRE-D inspection system, coupled with the CWFmaxx Dual Lane checkweigher.

The GLM-I emerges as a revolutionary force in food processing, blending space efficiency with cutting-edge Industry 4.0 integration. In response to the growing demand for transparent food information, this innovative system adeptly manages the automatic weighing and labeling of pre-packaged goods, bolstering both efficiency and transparency in the industrial food sector. A notable enhancement to the GLM-I is the introduction of a washdown version of the machine, offering an additional option for businesses requiring this feature, further emphasizing Bizerba's commitment to versatile and adaptive solutions.

Complementing the GLM-I, the LabelSecure Basic/G2 ensures the utmost accuracy in label content, playing a crucial role in quality control. This system is pivotal in preventing extensive rework, claims, and product recalls due to labeling errors, enhancing overall operational reliability.

"At Bizerba's booth, the spotlight is not only on the GLM-I but also on our latest automated inspection systems," explains Josh Brennan, Head of Inspection, North America. "These systems play a crucial role in maintaining the highest standards in product branding and packaging, ensuring compliance with SQF and BRCS label inspection, and modernizing FSQA programs. Furthermore, our X-Ray inspection systems are key to safeguarding against foreign object contamination, upholding stringent hygienic standards."

Aaron Garry, President and CEO of Bizerba North America, emphasizes, "Innovation and precision are at the heart of all our solutions. The GLM-I, along with the LabelSecure Basic/G2 and our advanced inspection systems, showcase our commitment to advancing food processing technology." He also adds, "Our presence at IPPE 2024 is more than just a product showcase; it's a demonstration of our dedication to pushing the boundaries of what's possible in the industry. We invite attendees to experience the future of retail processing at our booth."

Bizerba continues to lead in sustainable technology with solutions like the eco-friendly CleanCut® Linerless labels. The company's digital services, including remote support and predictive maintenance, offered by cloud-based platforms, significantly enhance service efficiency and reduce resource consumption.
