

Innovatec launches a vent sexing machine

We are pleased to announce the launch of a vent sexing machine with exclusive Xiashu technology. Using cameras and artificial intelligence, this new machine has a proven accuracy of 99% identification.

Via an exclusive agreement with Xiashu, this machine is made available for distribution for the poultry market and will be sold, implemented and maintained by Innovatec. Placed in hatcheries, in-line or stand-alone, this vent sexing machine will support growth, flexibility and increase your profitability.

Last week Stephan Luimes (Technical Manager) visited Dr Bowen Cai, Director of the Modern Agricultural Research Institute of Tsinghua University and Associate Professor of the Institute of Advanced Study of Tongji University of China.

The interesting discussions he held provide the basis for a collaboration, which we are very much looking forward to.

Interested in this vent sexing machine? Please contact our Area Sales Managers for more information.
