FOR IMMEDIATE RELEASE – 1/14/2025

Double L Group Launches DirectAire Cool Cell System to Enhance Poultry House Climate Control

Double L Group, a leading innovator in agricultural ventilation and cooling solutions, proudly announces the release of its DirectAire Cool Cell System, a revolutionary product designed to provide efficient and reliable cooling for poultry houses. This cutting-edge system is engineered to deliver superior performance, reduce water usage, and improve overall bird welfare.

The DirectAire Cool Cell System addresses the critical need for effective temperature control in poultry operations, offering a durable, low-maintenance solution that helps producers create an optimal environment for their flocks.

Key Features:

- **Increased Water Capacity:** The DirectAire Cool Cell System's unique trough design allows for a 20% increase in water capacity compared to traditional systems, ensuring consistent and efficient cooling during peak demands.
- **Durable, UV-Resistant Construction:** Built with high-quality, corrosion-resistant materials, the system is designed to withstand the harsh conditions of poultry houses, providing long-lasting performance.
- **Open-Top Design:** This feature allows for easy visual inspection and cleaning, ensuring minimal downtime and reducing the labor required for maintenance.
- **Customizable Layouts:** The system offers multiple configuration options to fit the specific needs of each facility, providing flexibility and maximum efficiency.

"The DirectAire Cool Cell System is designed with the modern poultry producer in mind," said Garrett Bradford, Poultry Sales Manager at Double L Group. "We've focused on delivering a solution that not only improves cooling efficiency but also reduces water consumption and maintenance efforts, ultimately leading to healthier birds and more productive operations."
