

FOR IMMEDIATE RELEASE

Agranco Corp. USA Introduces Groundbreaking Poultry Drinking Water Program with Big Results

BELLE, MO — Agranco Corp. USA®, a pioneer in agricultural innovation and bioremediation, announces the launch of its revolutionary Poultry Drinking Water Program, featuring two flagship products, Avaplex® and Nutriplex-W™. This cutting-edge line of drinking water additives is showing groundbreaking results and is set to redefine the standards of avian care and sustainable farming practices.

Avaplex® is a carefully selected and cultivated blend of species-specific **microencapsulated probiotics, dehydrated egg product, high quality proteins, and prebiotics** that is infused with citric acid and oregano essential oil. It is recommended for use to naturally provide **immune support** for all classes of avian species by promoting early intestinal development and providing rapid GIT repair in times of stress and illness. Avaplex not only stimulates antibody activity, but also reduces fecal matter challenges and environmental strains, and offers therapeutic aid for sick adult birds to restart the immune system, reduce pathogen loads, and get production back on track.

Nutriplex-W™ is a carefully selected and cultivated blend of species-specific **microencapsulated probiotics, live active yeast, enzymes, and prebiotics** that is infused with oregano essential oil. It is recommended for use to naturally support **optimal performance** and **overall animal health** by maintaining proper gut health and influencing critical functions of the GIT. Nutriplex-W, when used throughout poultry lifecycle, reduces mortality, improves feed efficiency, reduces fecal ammonia, and increases the bioavailability of essential nutrients.

"At Agranco, we are committed to providing innovative solutions that promote the well-being of livestock while aligning with environmentally responsible farming practices," said Paul Shanks, Director of Feed Additives at Agranco Corp. USA. "Our new poultry drinking water supplements exemplify this commitment, offering natural, safe, and highly effective products for all classes of avian species. Avaplex® and Nutriplex-W™ address key challenges producers face every day, from 7-day chick mortality to foot pad scores and even egg production goals."

Market results show that tackling these key challenges with Agranco's drinking water program has a significant impact on key production goals of poultry producers.

Key Features of Avaplex® and Nutriplex-W™:

1. **All-Natural Ingredients:** Avaplex® and Nutriplex-W™ are crafted from carefully selected, species-specific natural ingredients, ensuring the health and safety of your flock.
2. **Waterline Compatibility:** These products are safe for use with all drinking water equipment in poultry houses and will not clog waterlines, providing farmers with a hassle-free and efficient solution.

3. **Holistic Approach:** Avaplex® and Nutriplex-W™ offer a holistic approach to avian health, addressing immune support and overall performance through natural, time-tested ingredients.
4. **Environmentally Friendly:** As part of Agranco's dedication to sustainable agriculture, the poultry drinking water line is designed to minimize environmental impact by increasing protein utilization and reducing fecal ammonia, promoting eco-friendly farming practices.
5. **Increased Revenue:** Producers in the poultry market integrating Avaplex® and Nutriplex-W™ into their poultry operations have experienced a boost in revenue. These products have shown to immediately contribute to increased egg production, lower mortality rates, fewer unproductive days, and better FCR, ultimately enhancing the overall profitability of poultry farming.

By integrating these innovative products into their operations, farmers can contribute to healthier flocks and a more sustainable future.

About Agranco Corp. USA:

Agranco Corp. USA® is an innovator in agricultural solutions, dedicated to providing all farmers with cutting-edge products that enhance the well-being of livestock, promote sustainable practices, and contribute to the overall advancement of the agriculture industry.

Agranco Corp. USA® was founded in 2001, on the principle that “the good actions of today make for a better tomorrow.” Their mission drives them to innovate solutions that support the needs of a growing population while promoting sustainability, increasing biocapacity, and reducing their ecological footprint. Family owned and operated for over two decades, Agranco Corp. USA is fueled by their passion for making a positive daily impact on agricultural and environmental practices around the world. They believe in harnessing mother nature’s superpowers to provide premium, natural solutions that optimize livestock production and support the animal’s health.

Agranco products are developed and manufactured in the U.S. using premium quality, natural ingredients. What sets their products apart is the precise balance of proven ingredients that function in synergism to take the guesswork out of mixing micro-supplements, help prevent immunosuppression from mycotoxin challenges, and boost naturally occurring bioremediation to keep pace with demand.
