

Hightech — Innovation and New Global Connections (2025 Release)

Booth C19187

At the IPPE 2025, we reaffirm our commitment to innovation and excellence in the sector, developing advanced solutions and technologies for high-performance machines to process animal protein.

This opportunity provides an outstanding opportunity to connect with companies from around the globe, explore the latest trends and solutions, and strengthen our dedication to the international market by delivering high-performance machines that feed the world.

In 2025, we will launch new products designed to positively impact the industry, showcasing our potential for industrial transformation and highlighting the strength of the national manufacturing sector.

At IPPE 2025, We are excited to announce the upcoming launch of two innovative products: the most robust and efficient high-performance machines.

Separator HT 7.5-EC

The HT 7.5-EC Separator has a separation head designed for enhanced blade and output regulator durability, along with improved mechanical resistance. It features a support cart for easy disassembly of parts, providing full access to internal components during maintenance and cleaning. The manual mechanical adjustment allows precise performance tuning for optimal separation yield, while the bearing with a cooling system extends the assembly's lifespan.

Grinder MO 130

Built with the technology of the most robust line on the market, the MO 130 Grinder is equipped with 130 mm diameter knives and plates, ensuring high production capacity. Its compact design makes it ideal for environments with limited space. Maintenance is simplified by an easy-access system, supported by Hightech dedicated service team. Continuous monitoring of safety guards minimizes operational risks. Additionally, the grinder supports the use of two cutting sets, delivering exceptional grinding quality.

A Brief Overview of Our Story

Founded in 1988, the company started in the field of consulting and projects to food processing facilities. The HT machine was developed, known as Mechanically Separated Meat (MDM) machine, becoming the leader in the Brazilian market with over 90% share and exporting to 27 countries.

With state-of-the-art technical capacity and cutting-edge technology, Hightech has become a manufacturer of equipment for processing animal proteins, pet food, and collagens, swelling a wide range of equipment in its portfolio.

Driven by a clear purpose to revolutionize the operations of major industries worldwide, Hightech has made significant investments in a new industrial complex, reinforcing our commitment to delivering high-performance machinery solutions.

New and Modern Industrial Complex: The future is now!

Inaugurated in 2023, Hightech's new industrial complex combines cutting-edge technology with a modern structure spanning over 12,000 m² of built area in a prime location.

Designed to turn challenges into opportunities, the facility reflects our commitment to innovation by investing in creative environments. Featuring modern and functional spaces dedicated to Engineering, Sales, and Administrative functions, as well as communal areas such as meeting rooms, coffee and gourmet spaces, and relaxation areas, we strive to promote interaction among our employees and customers, promoting accurate information exchange.

In our Engineering, whether it be Mechanical, Electrical, or Automation, these three segments operate interconnectedly, seeking personalized, creative, and innovative solutions, providing transformative power to meet each customer's need.

Constant Investment in Structure and Technology

Our manufacturing facility consists of three large buildings. Due to the significant investment in infrastructure and technology, it has the capacity for expansions and layout adjustments. It is a modern industry that enhances efficiency in capacity, ensuring quality and guaranteeing the results of our products and services, leading to significant outcomes. This modern industrial setup enhances efficiency in production capacity, ensuring the quality and reliability of our products and services—delivering significant results for our clients.

HIGHTECH TOUR — Modern Customer Engagement Tools

The Hightech Tour is a personalized tool that allows our customers close contact to showcase the quality and innovation of our products and services. Whether it's for new equipment or support with parts and services, our goal is clear: to provide the best possible customer experience.

This tool serves two distinct purposes. First, it brings clients to Hightech, offering them the opportunity to explore our facilities and participate in training sessions. Second, it enables our team to visit client facilities, deliver equipment and conduct on-site testing.

The Hightech Tour is the perfect way to strengthen connections and demonstrate our commitment to excellence.

Guaranteed Results, Ease, and Safety

Hightech has invested in the construction of a modern and efficient testing laboratory, where clients can bring their products to process and verify the results they aim to achieve. This ensures safety and guarantees performance when acquiring a Hightech high-performance machine.

Every detail at Hightech is designed with comfort and safety in mind. During a client visit to our facility for testing or meetings, we provide a special room where clients can feel at home. Equipped with comfort and privacy, this space allows clients to relax or attend to personal matters while they wait.

Hightech — Machines that Transform the Industry.
