ST. LOUIS (Jan. 2020) – BV Science Inc. is a joint venture founded in 2017 between Vetanco S.A. located in Argentina and Dr. Bata Ltd. located in Hungary. Natural products designed as alternatives to antibiotics and mycotoxin eliminators to address universal health problems in food animal production have been selected from each company to form the BV Science product line for North America.

Natural plant extracts, yeast products and exciting new approaches to bolster gut health and immunity are all facets of BV Science, Inc. unique product line. These popular, research-based products are currently used with great success in South America, Central America, Mexico, Europe, Asia, and now the USA to improve animal health and productivity. BV Science will showcase its products and research in the BV Science Booth #2755 in Hall A during the 2020 IPPE Expo at the Georgia World Congress Center in Atlanta. Come join John Dickerson, Sales Manager & Maria Dashek, DVM, PhD, Technical Manager representing the USA to discuss our supportive data in detail.

“Vetanco S.A. has been growing in Latin America and other markets for more than 30 years through research-based products. We are excited and hopeful for continued success with our most popular antibiotic reduction natural solutions in the US poultry market” says Vetanco S.A. President & BV Science board member, Jorge Winokur. Vetanco S.A. supplies to BV Science, Inc. a water-applied prebiotic biopromotor, GAMAXINE®, with data supportive of its efficacy to improve gut health, improve production parameters and reduce Salmonella shedding.

Dr. Bata Limited specializes in developing unique plant sources and extraction techniques. “We enjoy strong success in Asia, Latin America and Europe and are happy to make our products available in the US” says Dr. Bata Limited Founder and President and BV Science board member Dr. Arpad Bata. “We are particularly proud of our natural broad-spectrum mycotoxin elimination product called Detoxa Plus®”. In addition, Dr. Bata Ltd., supplies its effective phytobiotic for necrotic enteritis and Clostridium spp. overgrowth, HERBANOPLEX®, to BV Science for distribution in the US. DETOXA PLUS® and a metallo-phytobiotic®, used to naturally control Brachyspira spp, Lawsonia intracellularis and Clostridium spp, DYSTANTIC® are available to the US swine market.

In 2017, BV Science Inc. was founded by Vetanco S.A. located in Argentina and Dr. Bata Limited, located in Hungary to provide natural products as alternatives to antibiotics to address universal health problems in food animal production for North America. Over the past two years, BV Science has gained market recognition and product use in all divisions of poultry production (Broilers, Layers, Breeders and Turkeys).
